

AVIATION WEEK

& SPACE TECHNOLOGY

AER SPACE 2011

January 24/31, 2011

CONTENTS

Volume 173 Number 4

DEPARTMENTS

- 4** Letter from the Editor
- 15-16** The World
- 18** The Inside Track
- 19** Airline Intel
- 20** In Orbit
- 22** Washington Outlook
- 171-172** Classified
- 173** Contact Us

MARKET FOCUS

- 10** **Boeing faces big** challenges beyond 787 headache, with pending competition in the narrowbody segment

THE WORLD

- 15** **SpaceX: We need** to make only three mods to the Dragon capsule so it can be ready to deliver crew to ISS

- 16** **Delta IV Heavy lifts** bus-sized NRO classified satellite into orbit; largest rocket launched from West Coast

COMMERCIAL PROGRAMS

- 24** **Latest 787** delivery delay to at least July leaves questions about effects on Boeing's long-term goals

- 26** **787 schedule slip** forcing customers to support older aircraft for longer, postpone Boeing Goldcare signups

- 26** **Delta CEO 'excited'** by Bombardier and Airbus in search for 200 aircraft, says Boeing 'has to match up'

- 28** **Airbus shifts attention** to managing production ramp-up, sees pitfalls in post-crisis growth period

- 31** **Virgin America** to begin talks with engine makers to determine the powerplants for its A320NEOs

- 32** **Airbus faces few more** months of turbulence for A380 deliveries, works to resolve supplier problems

- 33** **Despite signs** of turboprop order recovery, ATR expects another year of treading water

- 34** **Mexican low-fare** carrier Interjet looks to expand its fleet, puts faith in Sukhoi Superjet 100 regional jet

- 34** **GE counting on** joint venture with Avic in Shanghai to propel it into front ranks of avionics suppliers

CONTRACTING

- 35** **Supreme Court** ruling in case involving A-12 cancellation could affect any contractor doing classified work

DEFENSE DRAWDOWNS

- 36** **U.K. planners** cobbling together new road map to bridge capability gaps found during defense review

- 37** **Concerns mounting** in U.K. that antisubmarine capabilities are eroding due to competing demands

SPACE

- 38** **Likely recovery of** Galaxy 15 'Zombie Sat' expected to boost Intelsat and ensure backup for FAA's WAAS

- 39** **EC managers happy** with Galileo system progress, commit to ensuring the constellation is completed

- 40** **ESA playbook** for 2011 features more support for European launchers, approval of ISS lifetime extension

- 41** **ESA poised to begin** work on satellite network that will permit quick downloads of remote-sensing data

QUIZ

- 42** **Challenges and opportunities** face aerospace industry as commercial upturn meets defense downturn

- 46** **There will be no shortage** of interesting A&D developments this year. Here are 11 to watch.

- 48** **Interactive world map** provides access to data on leading contractors, major airlines key programs

- 50** **Joint Strike Fighter** took up a lot of media real estate in 2010; critical attention will continue into 2011

- 54** **Air forces rationalizing** their fleets of fighter and attack aircraft, cutting demand for trainers

- 56** **F136 production** for the JSF to proceed, ensuring that Pratt and GE continue to dominate fighter engines

- 60** **C-17 production** could end, leaving strategic transport field to A400M, while KC-390 will challenge C-130J

- 64** **Specification tables** provide latest data on current-production fighters, trainers and transports

- 80** **Advances in missiles** allowing one to perform multiple roles, blur divisions between segments

- 84** **Missile Defense Agency** struggling to solve flight-trial dilemmas and quality control problems

- 86** **Wild UAS spending** spree of the last few years is coming to an end as the U.S. is cutting back on expenditures

- 90** **Increased persistence** will be key theme in 2011 as a new generation of unmanned aircraft takes to the air

- 94** **Specification tables** provide latest data on unmanned aerial systems from around the world

ON THE COVER: *Can the continued strength of the commercial aircraft market offset the growing pressure on defense procurement? How the industry will fare in 2011 and beyond—from aircraft, rotorcraft and spacecraft to avionics, engines and weapons, and from airline operations to cybersecurity—is the theme of Aerospace 2011, an integrated print and online product that can also be found at AviationWeek.com/Aerospace2011. Cover design by AW&ST Art Department.*

- 106 Defense Department** notes top procurement and research and development programs
- 108 Airbus/Boeing duopoly** facing big challenges from new entrants to commercial transport market
- 111 Airline industry** expected to profit again this year, if external factors do not stall its recovery
- 116 Strong commercial** aircraft orders show the industry is beginning to recover from the downturn
- 120 Airfreight traffic** for 2010 likely will reflect growth of nearly 20% over 2009 thanks to rapid rebound
- 124 Boeing 737s** and Airbus A320s will generate more MRO work than other aircraft types this year
- 126 Specification tables** provide latest data on current-production transports from around the world
- 132 Stabilization seen** in the civil rotorcraft market, but growth not expected until 2012 or later
- 137 Robust demand** for military rotorcraft partially offsets slump in market for civil helicopters
- 139 Military production** will continue to represent significant percentage of the rotorcraft engine market
- 141 Halting recovery,** improved corporate profitability help spur business aviation sector
- 145 Business jet engine** manufacturers staying busy by developing variants for new executive aircraft
- 147 Optionally piloted** and electric aircraft, space transports among top technologies to watch
- 153 Turboprop sector** grows and pistons weaken as general aviation looks globally for growth
- 155 Need for self-protection,** demand for advanced EA systems drive military avionics market
- 160 Cyberoperations, EW** are areas that can expect to survive in shrinking defense budgets
- 163 Business opportunities** for Western avionics firms expanding as new players enter civil market
- 164 Future of U.S. human** spaceflight is a key factor influencing the launch vehicle industry
- 167 Demand for** satellite services remains strong, especially in developing markets
- 170 Milsat program** problems, budget restrictions combining to change thinking on capabilities

VIEWPOINT

- 174 NTR is best candidate** for near-term, advanced technology to support the exploration of space

FORECAST 2011

✨ The coming year offers promise as worldwide commercial aviation markets rebound and challenges as major programs, both military and commercial, feel the pressure of cost and performance issues. Forecast 2011 offers a multimedia opportunity with web pages designed for the commercial, defense, business aviation and MRO sectors. These pages feature interactive maps that will give you a global overview of each sector. View slide shows about key developments and technologies to watch for in 2011.

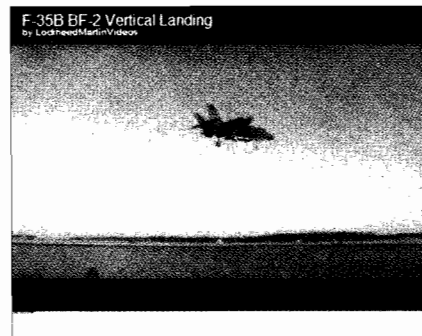

Wrapping up the week on Friday will be our Business Aviation Regulatory Update. Register to secure your place in these free webinars.

WEBINARS WITH INDUSTRY EXPERTS

✨ Aviation Week editors will discuss the prospects for 2011 with industry experts in webinars held each day this week at noon EST. Monday will feature an Executive Overview: The 2011 Aerospace Landscape. On Tuesday, the topic will be a Commercial Programs Update. Wednesday features a Major Defense Programs Outlook. Thursday's topic will be Business Opportunities in Worldwide MRO.

PREMIUM CONTENT

✨ AW&ST subscribers get free access to specifications for more than 4,200 aircraft, engines, missiles, unmanned aerial vehicles and other systems that can be searched and exported as Excel files. In addition, you will have access to interactive maps for key industry sectors.

F-35B LANDS VERTICALLY

✨ Senior Technology Editor Graham Warwick posted to Ares about the latest successful vertical landing tests for the F-35B, including video. Readers chimed in with 20 comments.
